

TASK 2

DATA VISUALIZATION & STORYTELLING

SUPERSTORE SALES ANALYSIS

DATA ANALYST INTERNSHIP

NAME: S.ANUSUYA

INTRODUCTION

Objective: To analyze Superstore sales data and create meaningful visualizations that tell a business story.

Tools Used: Tableau

Dataset: Sample Superstore Dataset (CSV)

Focus Areas:

- ❖ Sales performance
- ❖ Profitability
- ❖ Seasonality
- ❖ Category distribution
- ❖ High/low performing segments

SALES BY CATEGORY

Technology contributes the highest sales, followed by Furniture and Office Supplies. This shows Technology is the strongest revenue-generating category.

PROFIT BY SUB-CATEGORY

Phones, Copiers, and Accessories generate strong profit levels. Tables and Bookcases show negative profit, indicating discount or cost-related issues.

MONTHLY SALES TREND

Sales show clear seasonality, with major peaks in November and December due to holiday and festival purchases.

CATEGORY & SUB-CATEGORY SALES

Phones, Chairs, and Storage dominate sales within their respective categories. Some sub-categories require attention due to low contribution.

SALES VS PROFIT

Higher sales do not always mean higher profit.

Some products with strong sales still show low or negative profit, pointing to pricing or discount problems.

CATEGORY-WISE SALES DISTRIBUTION

Technology holds the largest share of total sales, followed by Furniture and Office Supplies. This indicates priority areas for sales strategy and marketing focus.

CONCLUSION

This data visualization project provided insights into:

- Sales performance across categories
- Profitability patterns
- Seasonal trends
- Product-level sales variations
- Discount impact on profit

THANK YOU
